

# Tyler J. Radlick

Software Engineer

## PROFESSIONAL PROFILE

As an experienced Software Engineer with a drive to learn, I have created rich web applications for companies such as Apple Inc. While writing software, I am always conscious of user experience and application scalability. I am familiar with common security vulnerabilities and take pride in crafting safe and secure applications. Looking to less known solutions as a self-taught developer, I am extremely comfortable with working outside of the box. I look forward to collaborating on your next project.

Javascript

LDAP Authentication

Bash

CRUD Design

Composer & NPM Package Managers

UX/UI Design

Agile, Waterfall, and DevOps

Linux

Docker

Git/SVN

Photoshop

Illustrator

Atom

Windows and macOS

## EXPERIENCE

Software Engineer  
Apple Inc. | 2012 - Present

While at Apple I was presented with a range of opportunities. As our Lead Developer, I was responsible for oversight of our mission critical web applications. This allowed me to refine my development knowledge and gain all new skills with Laravel that can be applied to other MVC frameworks.

- Architected three mission critical web applications
- Assisted with seven web applications as a co-developer
- Refined knowledge of PHP and Javascript
- Lead Developer on a team of six
- Worked with Information Security to ensure global compliances
- Managed a Docker Swarm DevOps stack
- Created an automated backup system to on-premise S3 Compatible Storage
- Followed Agile, DevOps, and Waterfall development methodology
- Responsible for training and code review of peers

## Owner

Infinity Host LLC | 2010 - Present

My daily responsibilities at a hosting company range from working with customers designs to managing a LAMP stack. Managing billing, support, and server security are the required skillset needed. Running this small business has provided me insight into some larger technologies.

- Managing a CentOS LAMP Stack with cPanel and WHM
- Configuration of PHP-FPM, DNS, Exim, Postfix, and FTP servers
- Designing Wordpress Themes and Plugins
- Correcting Security flaws in customer installations
- ESXi Virtualization and Hardware tuning
